FOR IMMEDIATE RELEASE

October 20, 2011

MMS FOR SCHOOLS[®] STUDENT INFORMATION SYSTEM AWARDED SIF 2 CERTIFICATION

BARRINGTON, NH, OCTOBER 20, 2011: Computer Resources, a pioneer in providing computerized Student Information Systems for K-12 schools, is pleased to announce that its MMS For Schools[®] software suite has been awarded Schools Interoperability Framework (SIF) v2 certification by the SIF Certification Authority, The Open Group.

Computer Resources' MMS For Schools Generations Edition software has been SIF certified for several years and, in keeping with their commitment to helping schools improve their efficiency and effectiveness, have enhanced their MMS software to keep up with the latest SIF specifications. The SIF v2 certification means that the MMS For Schools Generations Edition software will be able to easily exchange data with other SIF compliant programs (data warehouse, transportation, food service, library, financial, etc.) in use by schools or school districts.

This will reduce or eliminate duplicate data entry, saving time and frustration, and making it much easier for school administrators and educators to gather the information they need to make informed decisions.

About SIF

The Schools Interoperability Framework Association (SIFA) is a non-profit organization made up of software publishers like Computer Resources, school districts, state educational organizations and others committed to improving the process of education in the United States. The goal of the SIF initiative is to enable diverse software applications to share data without the need for a lot of expensive, customized programming within each school district and to deliver accurate information to school and district personnel when and where it is needed. Detailed information can be found on the SIF web site at <http://www.sifinfo.org>.

About Computer Resources

More than 30 years of service to the educational community, coupled with its powerful, flexible, customer-driven products and services, has made Computer Resources a leader in school management software. Now in its fifth generation, the company's MMS For Schools software suite has grown and developed based largely upon feedback and requests from the school administrators and staff who use it daily.

MMS is used by public schools and districts of all sizes, and by Charter schools, faith-based schools and private and independent schools across the country. The company's team of dedicated professionals includes former educators, as well as technical specialists and others who understand how schools work and how to make that work easier.
